

2012 SEMEN CATALOGUE

I have updated our 2012 catalogue with more pictures and info on the bulls we have in our tank. Many of these bulls are of older origin, however I believe that most of these bulls are right for the times. They have growth, muscle and depth of body in a moderate mature size. Some of this semen is also limited, so if you are interested don't wait it may be gone.

I have included EPD percentile within breed rankings (%wb) of each bull rather than the actual EPD itself. I believe that the percentile ranking is more useful as it tells you exactly where the bull stands within the breed population. The higher the number, the closer the bull is to the top of the breed for that specific trait. The only confusing one is the birthweight number. A high percentile ranking means a lower birthweight. Also please note that many of the older imported bulls have low percentile numbers. This is not a true measure of their abilities, as the numbers are based on 30-40 year old data and data of distant relatives. Some of these bulls will work very well in today's market. If you need any help interpreting the EPD's let us know.

I have not listed detailed pedigrees. If you want more info please contact me, or pedigree information can be found online at:

<http://www.clrc.ca/cgi-bin/query.cgi?association=75>

Scroll down to the search by registration number, enter the registration number provided in brackets behind each bull's name in this catalogue and hit enter. You may be given several choices so you will have to click the appropriate bull's name on the website.

I also have a comprehensive list of other semen that may be available, so if you don't find the bull you're looking for in our catalogue, contact me anyway, and I may know where you can find some.

Also, we are always on the look out for Blonde semen and embryos for our own use as well, so if you have some for sale, or know of someone who does, let us know.

All prices listed are in Canadian dollars and do not include shipping or handling.
